Towns are Alive!

The infrastructure is the social fundamental systems which is needed for a town, that everyone utilizes. In this way the infrastructure is a source of life support for people and town. But, how is the maintenance of this infrastructure performed?

IKEE Group: The Glocal Infra Tech Service

The IKEE Group companies are the specialists on township infrastructure!

A town is a huge living structure. As it has a life, it grows, and needs to be cared. Therefore, the IKEE Group Companies offer maintenance and management solutions for township infrastructures just as medical doctors provide treatments for human beings. In case of a disaster each company of our group will handle its specialized fields and the various damaged lifelines will be restored quickly with deploying our expertise. Thus, the organized companies in our IKEE Group are promoting a view to creat and maintain the perfect infrastructure for human interaction and the surrounding environment using their successful state of the art technologies, benefiting society as a whole.

Reciprocal Collaboration System Complementing within IKEE Group:

The IKEE Group Companies are the collective specialists on maintaining and creating city infrastructures.

They function independently, and according to the content of the works,

the synergy of the group is the key to provide successful rapid approaches to meet the needs of clients with the joint collaboration of IKEE participated group companies, people, works, information, and materials.

The IKEE Group Companies are:

Providing an Infrastructure to Achieve Eco-Friendly Environment,

Encouraging the 3 Re's (Recycle, Reuse, & Reduce) for Creating a Recycling System

Promoting Low-Carbon Society with our Underlying Technology to Reduce CO₂.

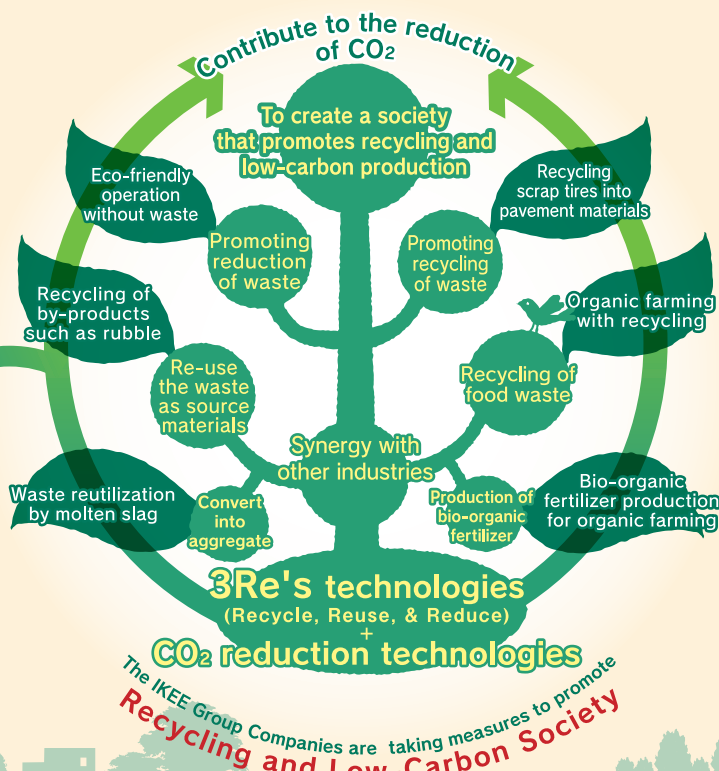

All the companies in IKEE Group are creating and promoting many recycling systems: We recycle the various kind of waste into the pavement materials, which are confirmed as secured and reliable.

Bio-organic fertilizer is produced by recycling food garbage for the organic farming. This way we put emphasis on utilizing our various environmental recycling technologies to achieve eco-friendly society with the reduction of CO₂.

All the companies in IKEE Group are creating and promoting many recycling systems: We recycle the various kind of waste into the pavement materials, which are confirmed as secured and reliable. bio-organic fertilizer is produced by recycling food garbage for the organic farming. This way we put emphasis on utilizing our various environmental recycling technologies to achieve eco-friendly society with the reduction of green house gases.

Low-Carbon Society: A society that adopts patterns of consumption, and behaviors that are consistent with low levels of green house gas emissions

Environment Materials
Division

Roads, Sewage ducts Specialist
Specialist on
Environment materials

We also introduce environmental goods and products to give better landscapes.

We introduce and sell convenient materials and products to solve "small troubles" of road-paving, -joints, and -gaps in road surfaces.

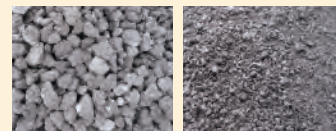

“Re” Technology Recycling technology

Construction machinery use biofuel.

Discarding construction waste materials can become problems for our environment. therefore we process and refine, constructions waste and slag (incineration ash) in our production of asphalt concrete material.

Recycled material

Construction waste for recycling

Recycling is done by Tortoise-green CO.,LTD

■The Debris (Concrete, Asphalt)

■Concrete waste

■Not curing Concrete

Other recycling

Acceptance, Processing, Sale

●Slag is incineration ash

Garbage and rubbish are incinerated at very high temperature and melt- solidified and environmentally benign. We accept slag then crush it into very small particles, And we sell it as alternative of sand and gravel for asphalt and concrete.

Acceptance, Sale

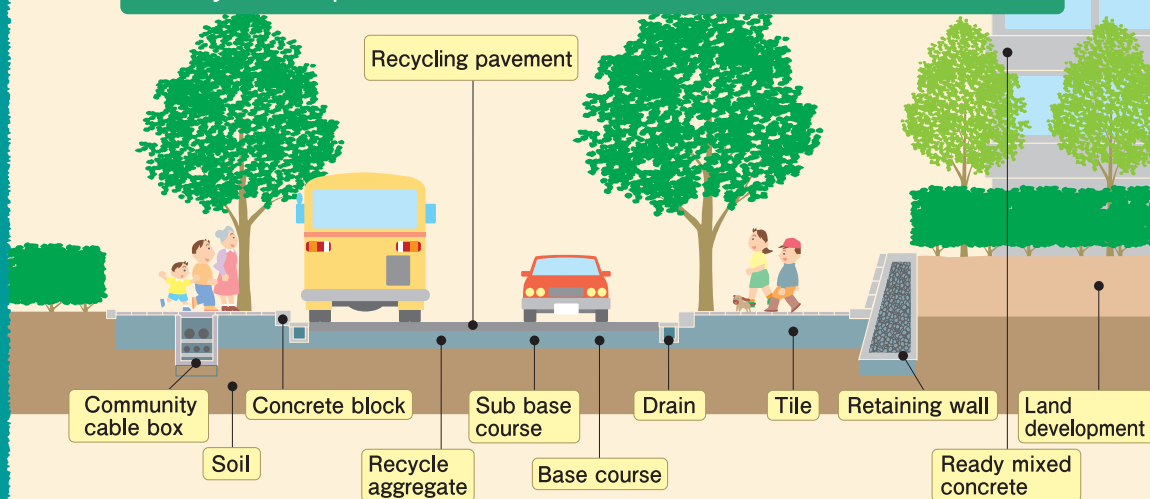

●Fly ash ●Blast furnace and granulated slag

The fence is used for noise reduction.

●Recycle example

The tortoise-green is an "eco-action21" certification and registration company.

"eco action 21" is the newest guide line certified by Ministry of the Environment in Japan, whose purpose is to encourage companies to comply with the law, Tortoise-green is accredited and registered.

Precision Agriculture with Organic Recycling Specialist for Crop Fields

Precision Agriculture

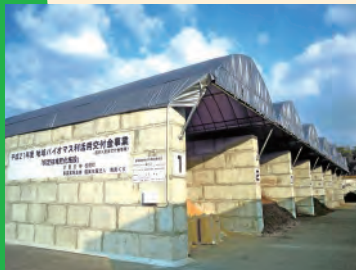

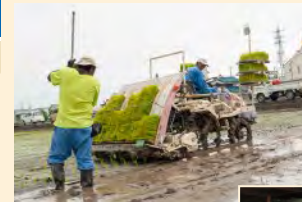

Aguri is a certified eco-farming.

Aguri was certified as an eco-farmer by Governor of Ehime in 2003. To be certified as an eco-farmer, the company must use compost, reduce chemical fertilizer, and reduce dependence on other agrichemicals. The introduction of sustainable agricultural production system which is environmentally friendly has been promoted since 1994.

Secured Food
Reliable Job
Opportunities

Aguri is under-
taking stable
employment.

The stable employment within the IKEE Group Companies is possible by checking the fluctuations of amount of business in the group and by locating the spare workers effectively through managing the farming tasks carefully. One of the merits of Aguri is that technical machine operators in the group can be redirected in agriculture.

Recycle Oriented Organic Farming with IKEE's recycling technologies

Soil Fertilization
by Food Recycle

Organic Agriculture
Nurtures
Healthy Crops.

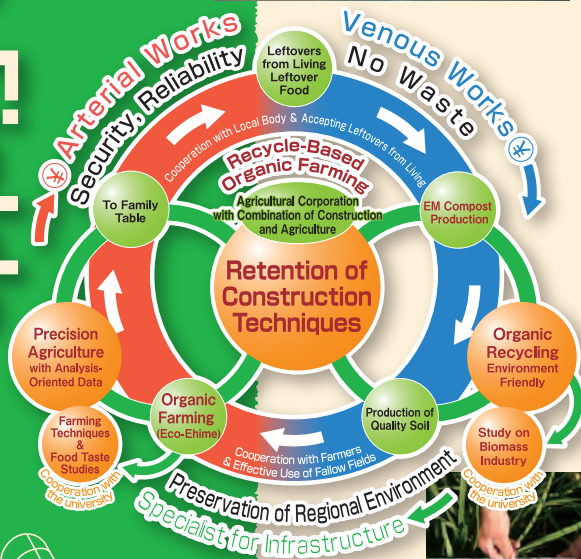

Remaining food is decomposed by microorganisms and converted into mature compost which is suitable for eco-farming with no agricultural pesticide and no chemical fertilizer. This way the leftover food is recycled for improving soil texture and structure for the eco-friendly farming.

Precision
Agriculture

Agriculture with High
Technology Challenges
the Techniques
of Expert Farmers.

By analyzing the techniques of expert farmers scientifically a database is constructed and both the database and the feedbacks by the farmers who produce the crops with blessing from the nature are used for at the development of novel agriculture, which can be referred as 'precision agriculture'.

The property of crop fields is carefully checked by introducing high technologies and latest information. We put emphasis on minimizing the uneven quality and the information acquired from the soil and crops, which is based on the studies in collaboration with local universities in order to improve production techniques.

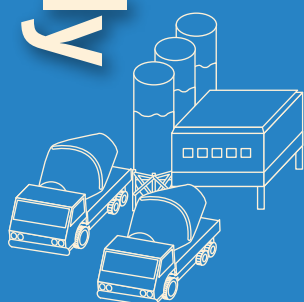

アイル株式会社 I'II

AIRU CO.,LTD.

Pioneer of Providing Regional Services for Ready Mixed Concrete Specialist for Concrete Supply

There is a concept that has not changed since the establishment of our company. Our emphasis to produce high quality materials remains the same.

We put a policy into action by looking at our future just as the spirit was put into our company name as 'I' II (I will)'. Airu Co., Ltd. supplies ready mixed concrete customized for a wide range of applications and service environment with the emphasis on high quality management. We assist regional developments with new infrastructures.

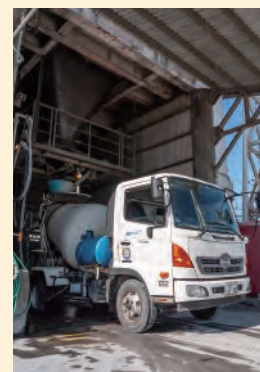

Providing Customized Services According to Various Needs with Comprehensive Management System

A comprehensive management system controlling all the functions for the ready mixed concrete production plant has been introduced for many years and the customized services according to various needs are available.

We supply high quality ready mixed concrete according to specifications of the work sites.

Remodeling Landscape Sites Specialist which Makes us Feel Good Inside on Greenery

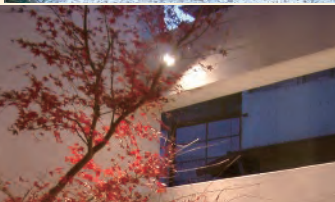

**We Provide the Space Designing Techniques
Which remain with us and Give Pleasure to our Eyes,
Creating 'Healing Spots' in Gardens and Towns.**

We supply beautiful gardens or spots filled with a veritable tapestry of flowers and trees. Such seasonal views are deeply rooted in Japanese culture. This way we provide remodeling services for a healing garden to a huge entertaining landscape sites, encouraging life relaxation.

●Rooftop Garden:Chapel Garden at Matsuyama ANA Hotel

●Outside Garden Works of a Personal House

●Planting Works Bay Side Geihinkan

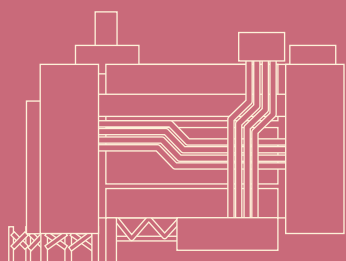

●Stone Works

Thermal Insulation Saving Energy

We focus on productivity of plants by saving energy and conservation.

It is important for plants such as chemical plants, power plants, boiler-gas plants to use thermal energy efficiently.
Kaga-engineering supplies insulation for equipments.

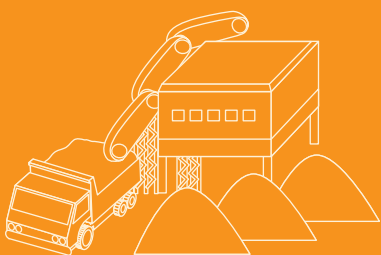

愛媛中予砕石
石材の町医者

We support
the Fundamental Infrastructures.
**Recycling Specialist
for Crashed Stones**

We Provide Infrastructure Supporting Materials with Flexibility for Various Needs.

We provide crushed stones of approximately 2million tons/year to the central part of Ehime Prefecture by quarrying raw stones from Toon town and produce crushed stones. We produce high quality crushed sand to adjust to a variety of needs and we have a stable supply for our customers.

Houses and Buildings Specialist

Constructing buildings that will remain in place for 200 years

Biruri Co., Ltd. practices our company's idea for constructing buildings that will remain in place for 200 years, utilizing energy-saving and eco-friendly technology in modern times. We undertake the remodeling of ordinal residences as well as the remodeling for anti-earthquake reinforcement and long-term care support in addition to the building of custom homes.

Remodeling for Anti-Earthquake Reinforcement

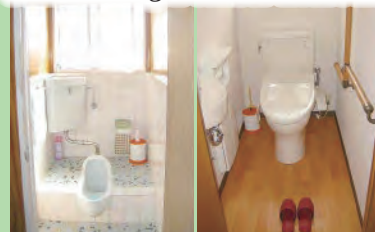

Constructing a secured house

We do the aseismic examination and anti-earthquake reinforcement. If you do the remodeling at the same time, you can do the work at a lower cost.

Remodeling for Long-Term Care

Constructing a tender heart house

Before → After

We propose and do customized impediment removals.

Ordinary Remodeling

Constructing comfortable rooms

It is a right time to remodel your home when you feel something uneasy about your house. Please feel free to contact us and we will put your ideas into your home such as a modern eco-friendly remodeling.

New Custom Homes

Designing custom homes

We can create a custom home design just for you; We can modify any house plan to meet your needs.
